

TOSHIBA ENHANCES BUSINESS DEVICES WITH CUTTING-EDGE CONNECTIVITY AND SECURITY FEATURES

- **USB-C ports and backlit keyboards improve connectivity and productivity**
- **Fingerprint and IR biometric options strengthen multi-layered device security**

19 March, 2019, Neuss, Germany – Toshiba Client Solutions Europe today announces a host of upgrades to three devices within its Satellite Pro and Tecra 15" series of laptops, centered on enabling immediate connectivity, enhanced security and efficient mobile working. The refreshed products launching today are the Satellite Pro R50-EC, Satellite Pro A50-EC and Tecra A50-EC.

Unhindered productivity and connectivity

Building on an already impressive array of connectivity options – including HDMI and RGB slots – is the addition of a cutting-edge USB-C port. This not only allows for USB 3.1 connectivity and subsequently increased data transfer speeds of up to 5Gbps, but also brings the benefit of an increasingly common port to connect with a growing range of peripherals. These include Toshiba's optional USB-C Dock, which enables immediate connectivity with other devices, minimises cable clutter via a single wire and can extend hard drive space with the use of Toshiba's external storage drives – perfect for the busy executive on the move.

Enhanced in-built security

Featuring multiple layers of security inside and out, such as HDD password and Advanced Encryption (TPM 2.0), users of the Satellite Pro A50-EC can now enjoy the option of SecurePad™ with Synaptics® Natural ID fingerprint sensor, a new touchpad with a built-in fingerprint sensor. In addition to including the optional SecurePad™, the Tecra A50-EC also features an IR camera which enables optional facial authentication via Intel® Authenticate and Windows Hello face sign-in. The presence of these biometric features provides an added-layer of protection to the already highly-secure E-Generation series.

Alongside these security options, the Tecra A50-EC's silent heavy-typer keyboard – designed to withstand even the most demanding workloads – is now backlit, offering the flexibility to type efficiently and accurately, even when in non-optimal lighting environments. Built for today's mobile worker, these ultra-portable products all also boast battery life of up to 10.5 hours for uninterrupted productivity throughout the day, no matter the location.

"These cutting-edge updates to devices in our business range demonstrate our goal to provide the fastest, most powerful, secure and functional laptops for professionals on the move," said Damian Jaume, Managing Director, Toshiba Client Solutions Europe. "We understand that working patterns are evolving and we want to ensure that our technology moves in tandem with those shifts. These updates deliver the right mix of convenience, connectivity and robust security for the contemporary business user".

Toshiba's E-Generation laptops are elegant in design and focused on delivering enhanced security, seamless connectivity and reliability. Performance and efficiency are maximised by the power of up to an 8th Generation Intel® Core™ processor. These latest Satellite Pro A50-EC, Satellite Pro R50-EC and Tecra A50-EC models underline Toshiba's expertise in the B2B PC space, delivering robust yet practical devices which are designed to be ultra-mobile without compromising on high power or performance.
